

NaviLens

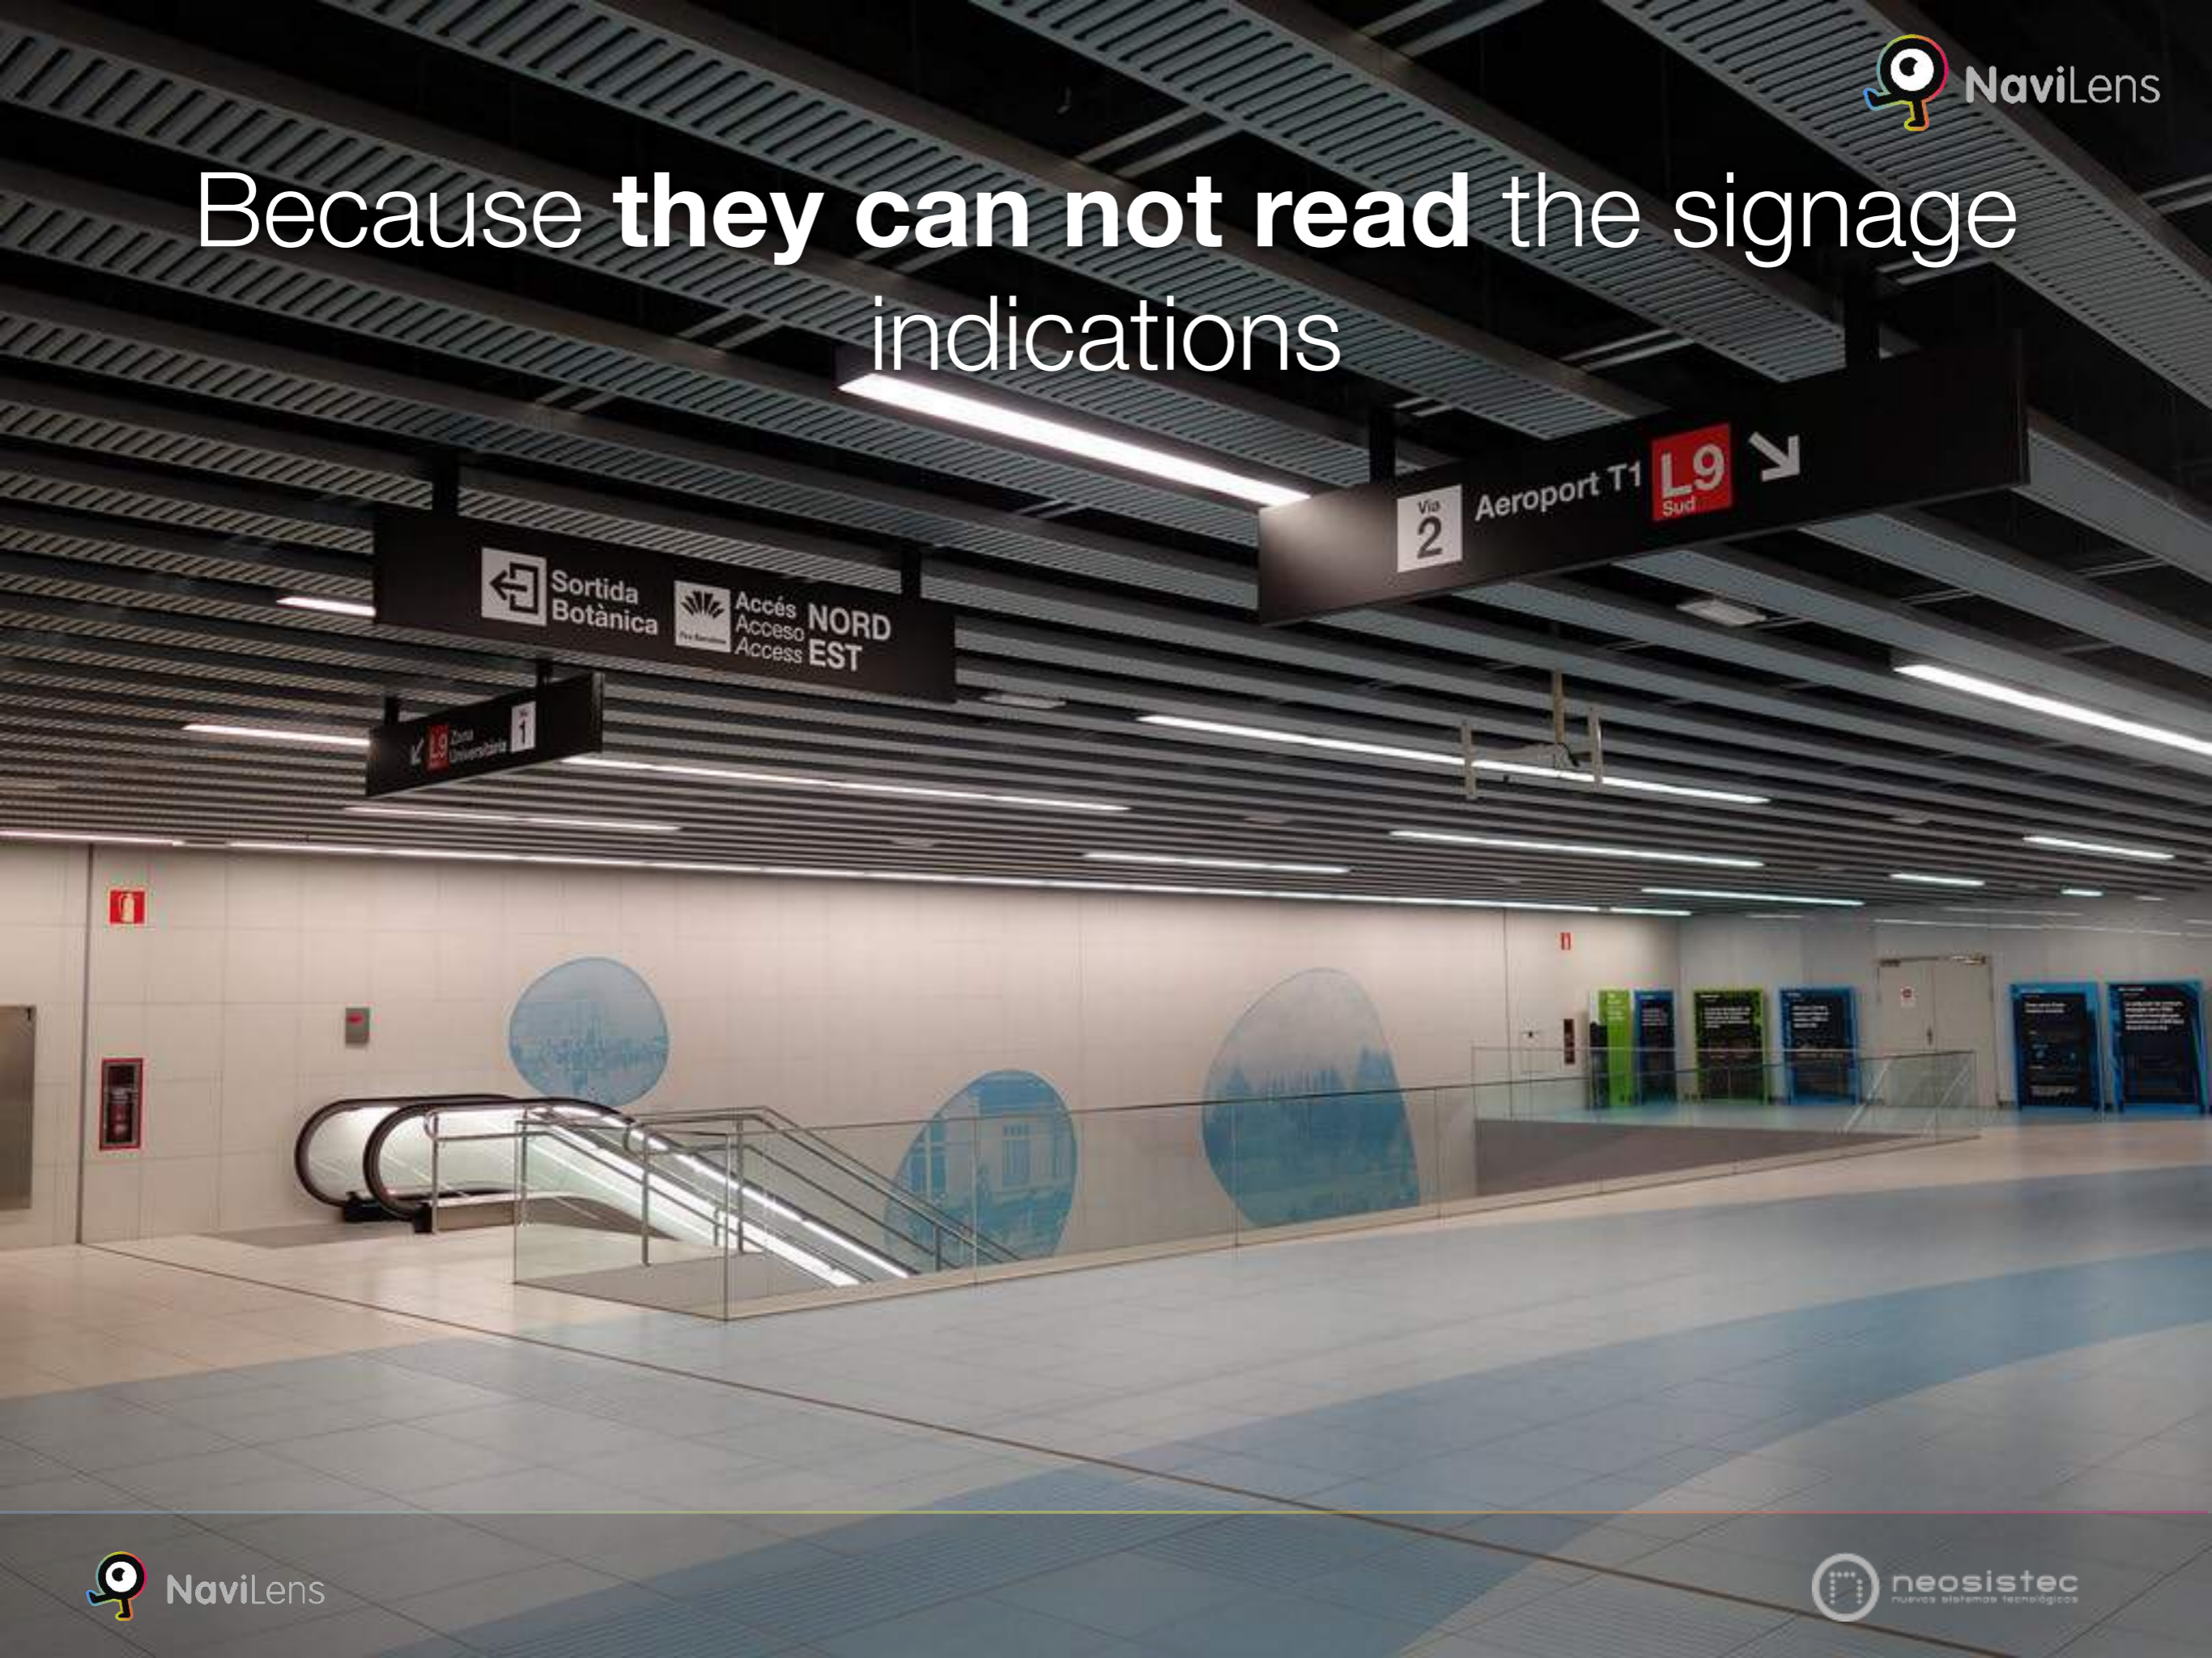

Empowering the visually-impaired
Tactile-Paving use case

The visually-impaired people
Wayfinding challenge on transit

The Problem

*The visually impaired people are not
completely independent in **unknown
spaces***

Because **they can not read** the signage indications

Tactile-Paving is present in some transit facilities

But the users face similar challenges...
Must I TURN to the left or to the right?

Our idea

To use the camera of the mobile phone to read the tactile-paving as a signage

Our first approach was to use QR codes

But QR codes don't work...

- *The user needs to have the camera perfectly focused to the QR code*
- *It's not possible to read while the user is moving*
- *It's not possible to read a QR with angle*
- *Auto-Focus issues -> very slow to read it*

CONCLUSION:

QR is impossible to be applied for help the visually-impaired

It was imperative to INNOVATE and create something new!

5 years of intense R&D

2012 -> 2017

between Neosistec Startup & University of Alicante

Searching for a QR code readable for the visually-impaired

Atocha Station - Madrid

Atocha Station existing tactile-paving

NaviLens code on vinyl added over the decision points

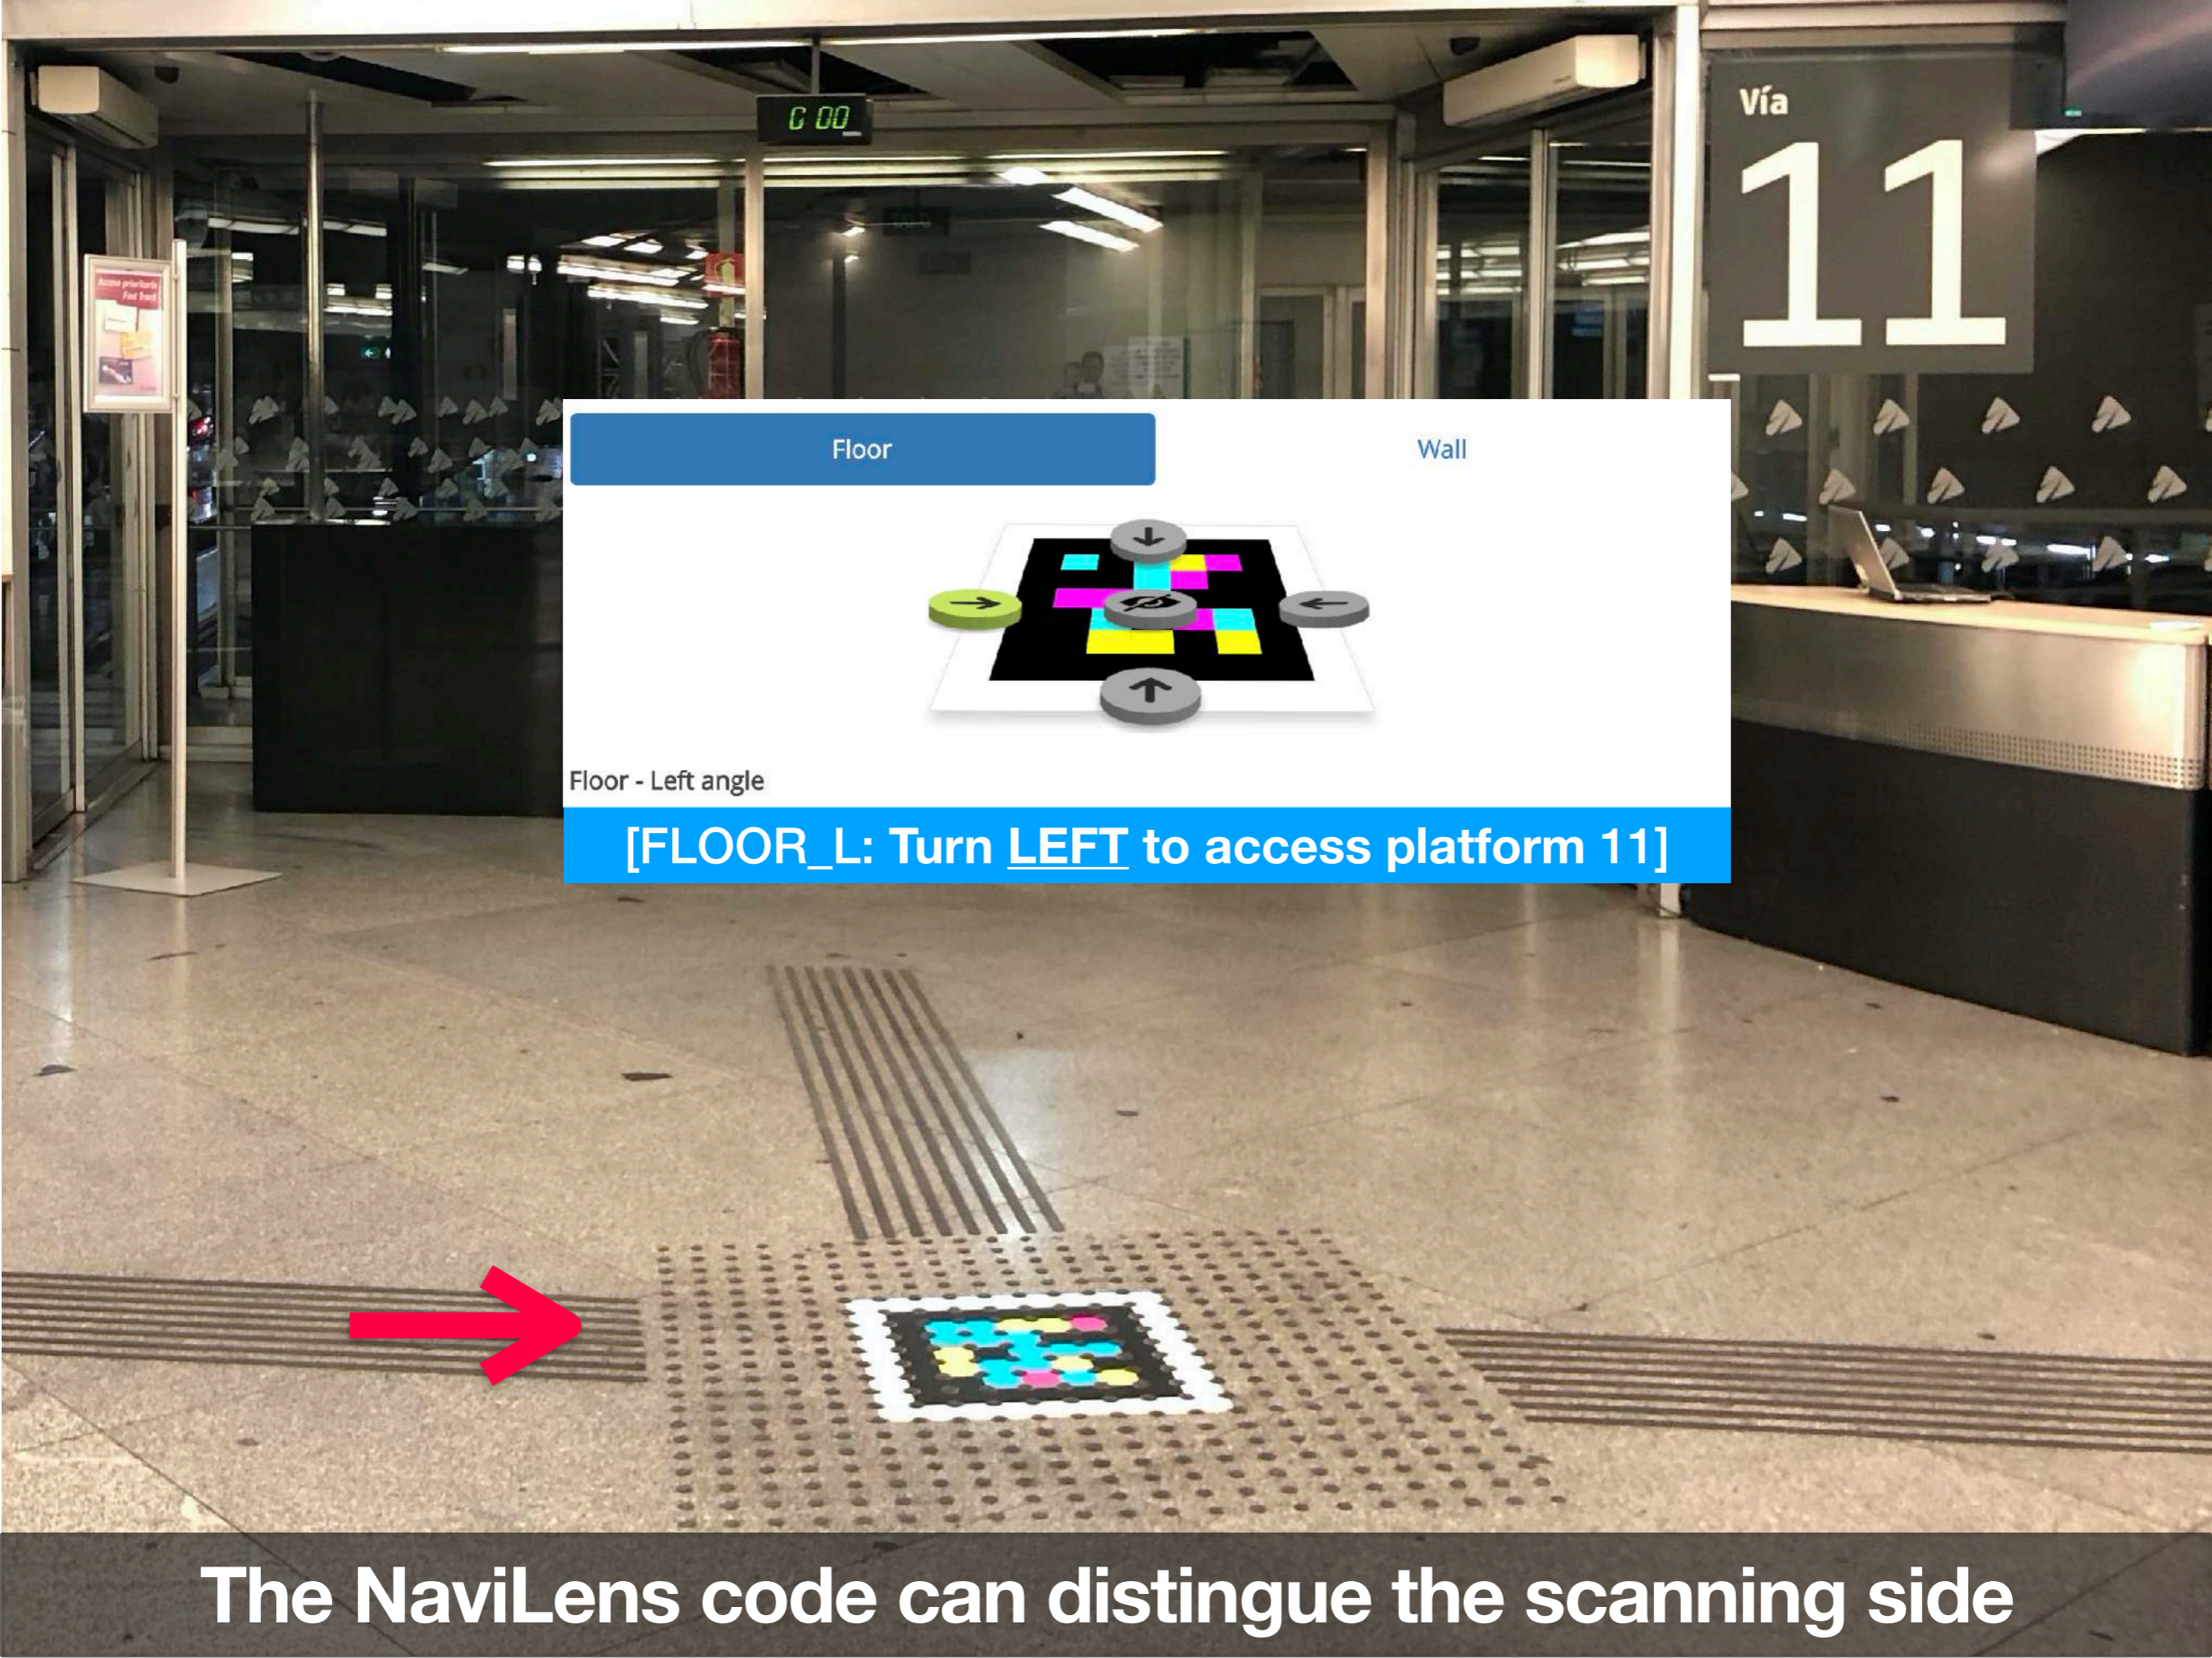

Platform 11 - Atocha Station

Two possible origins. How to solve the guiding?

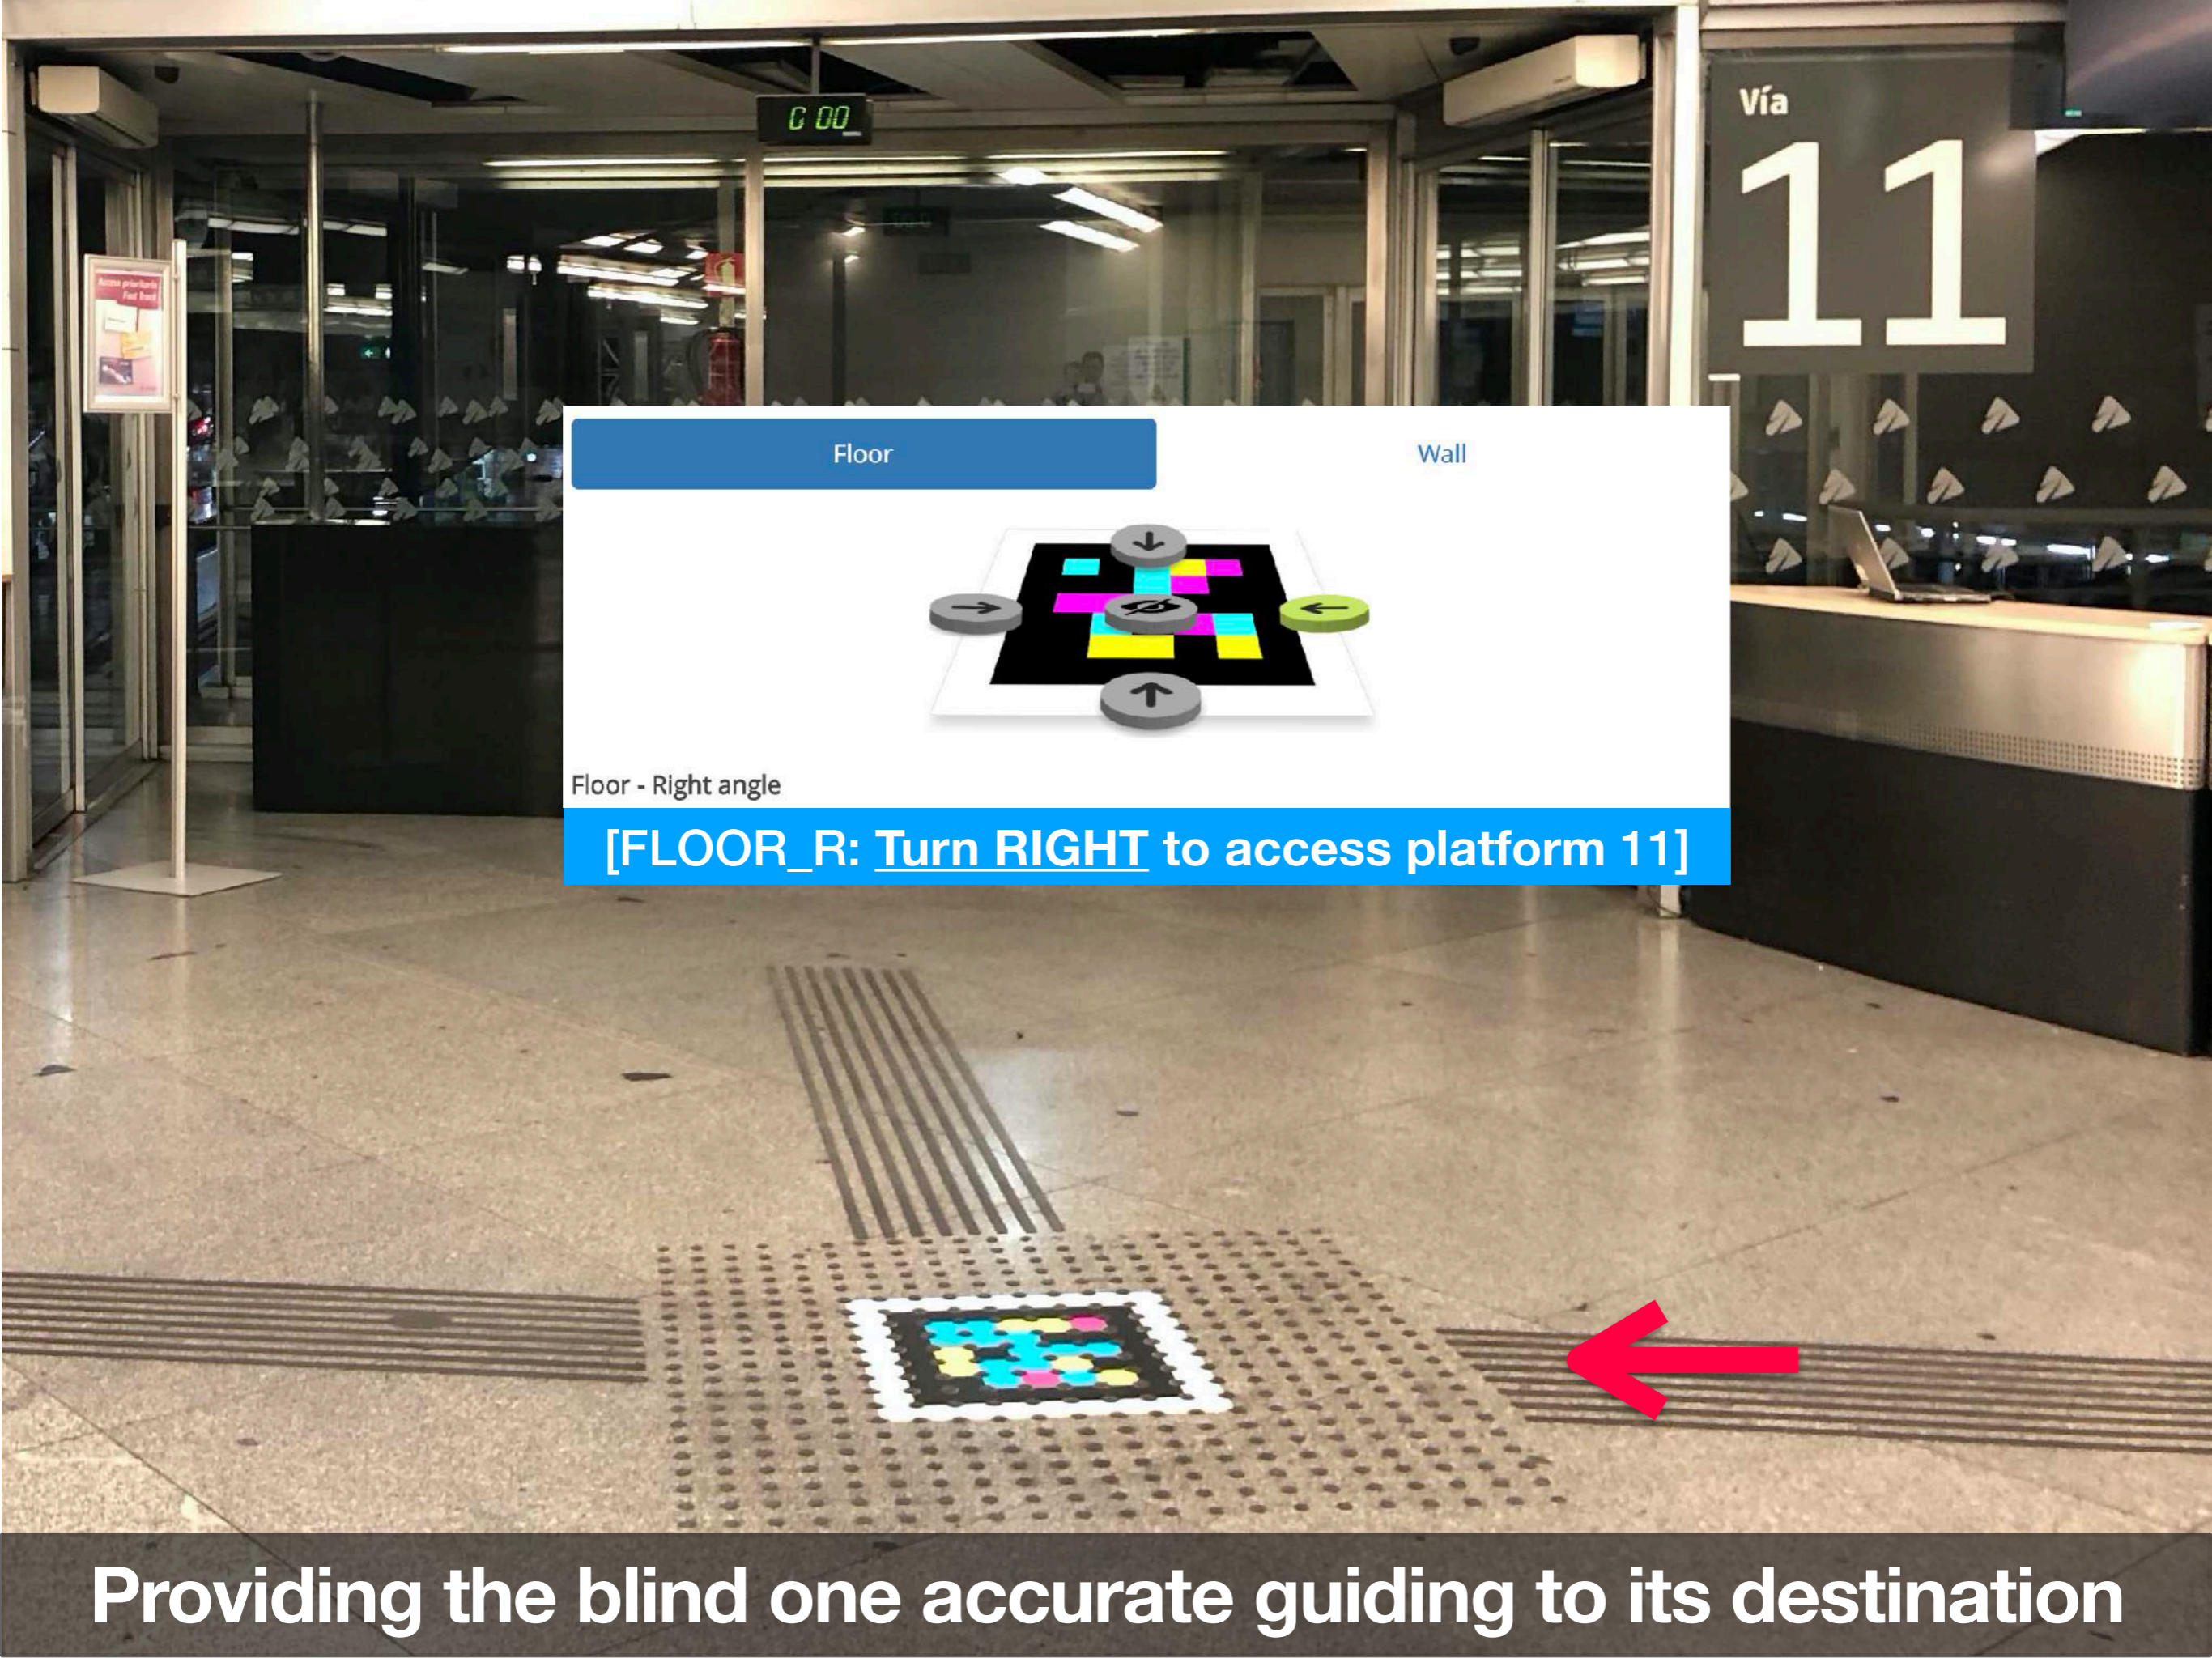

Floor Wall

Floor - Left angle

[FLOOR_L: Turn LEFT to access platform 11]

The NaviLens code can distinguish the scanning side

Floor

Wall

Floor - Right angle

[FLOOR_R: Turn RIGHT to access platform 11]

Providing the blind one accurate guiding to its destination

Achieving a full independently wayfinding for the blind users

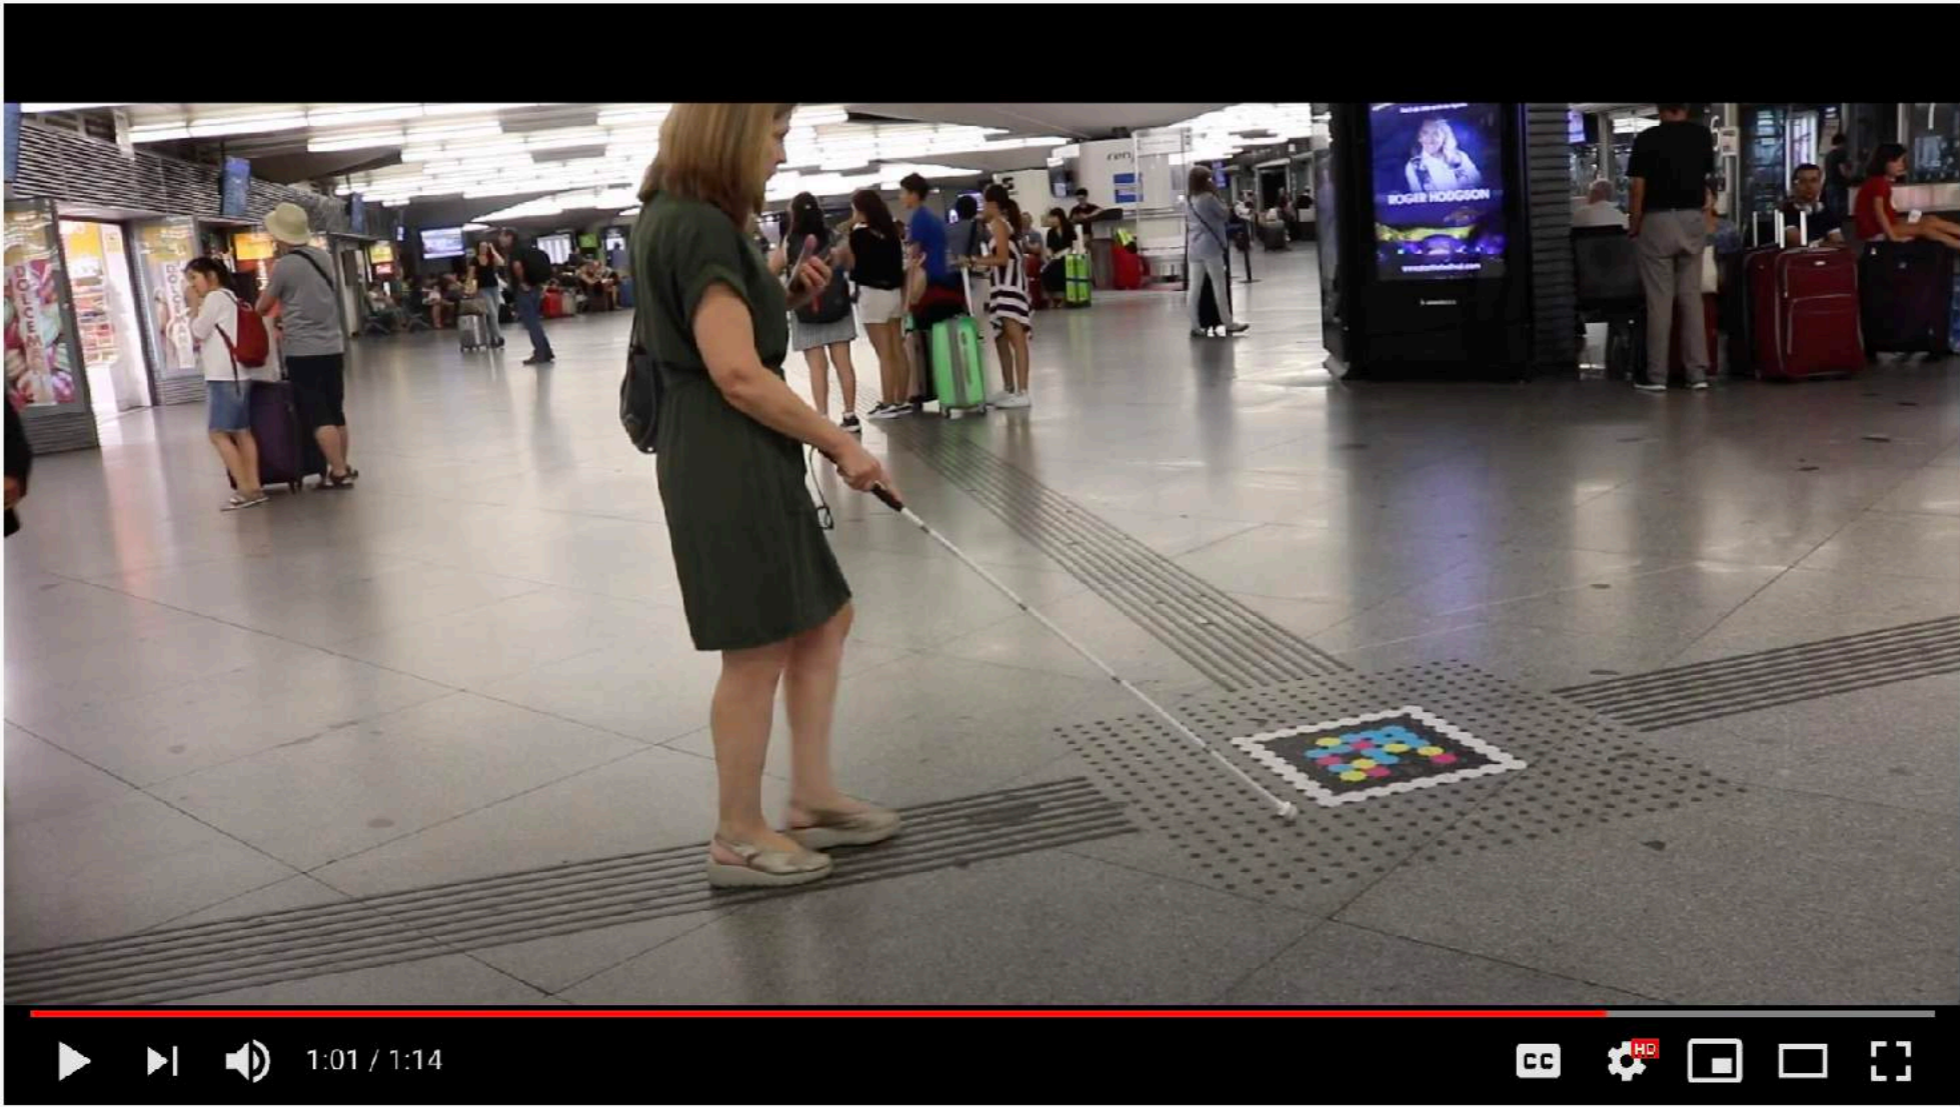

As easy as adding a vinyl NaviLens code over the tactile paving

And at the same time delivering augmented reality wayfinding for everybody

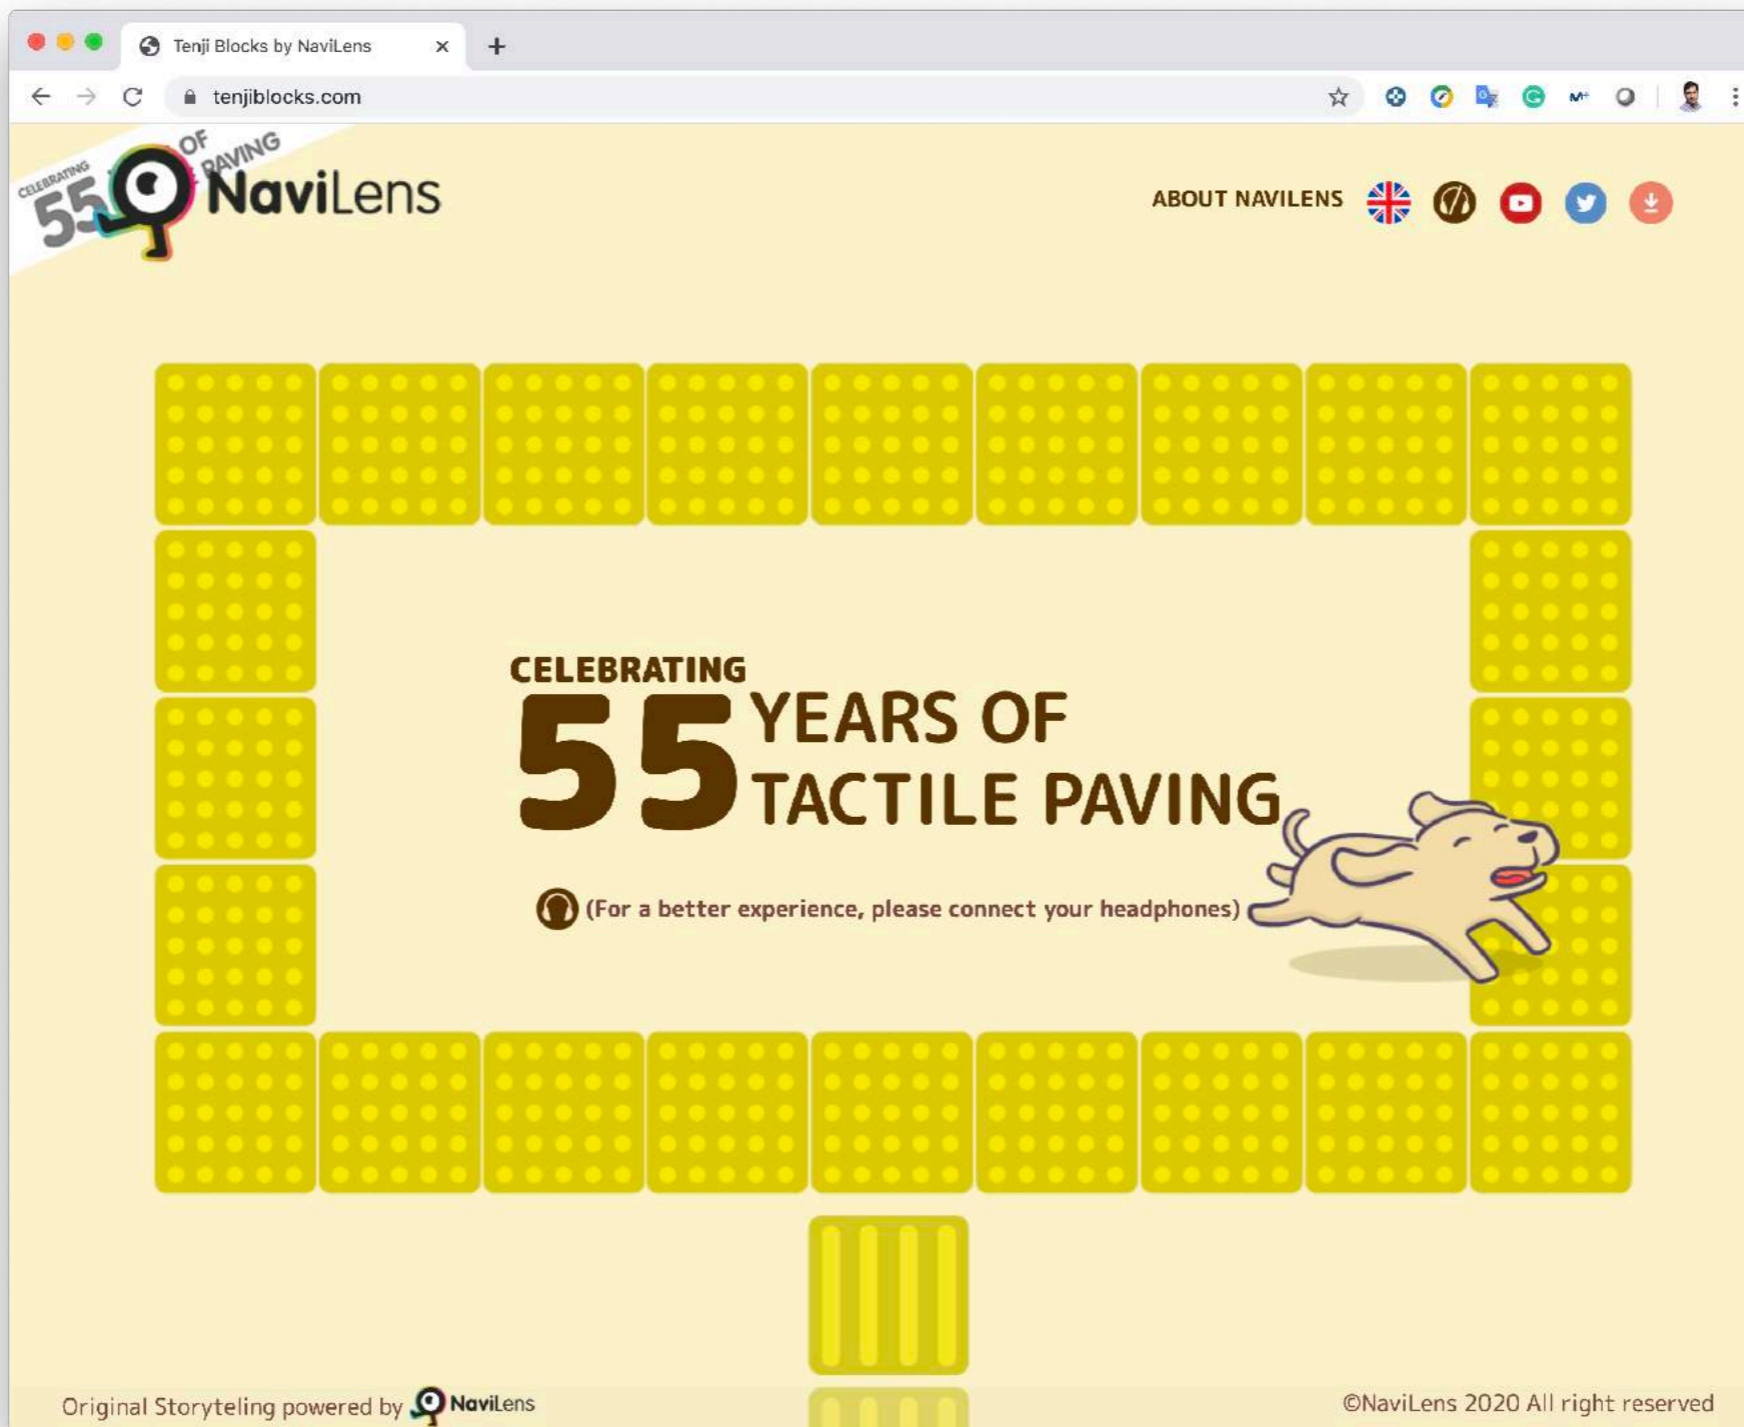

See the visually-impaired users testimonies

The image shows a screenshot of a YouTube video player. The browser address bar displays the URL `youtube.com/watch?v=g8YE5lckVIM`. The YouTube search bar contains the text "navilens eng aotcha". The video itself shows a woman in a green dress using a white cane to navigate a tactile paving system in a train station. The video player controls at the bottom show a progress bar at 1:01 / 1:14 and various icons for play, volume, and settings.
